

CUSTOMER RESULTS

“This facility does huge volume — probably 1.5x what we had planned. The RM 6000 delivers. Other competitors couldn’t get to the height and capacity that we needed. We always want a heavier pallet higher and faster and Crown was able to come out on top. With the Xpress Lower™ feature, if you start adding the lifting and lowering speed advantage you know you’ll move more pallets in an hour. Those seconds make a difference in a day’s time.”

Henningsen Cold Storage

Move Beyond Your Productivity Expectations with the Crown RM 6000

APPLICATION

Henningsen Cold Storage is one of the largest public refrigerated warehousing companies in the U.S. Its refrigerated logistics consists of a national warehouse network totaling more than 53 million cubic feet of multi-temperature controlled storage (-20 to +60°F). The company is based in the Pacific Northwest with 11 facilities located throughout the United States.

CHALLENGE

When Henningsen Cold Storage builds new facilities, the company often pushes the envelope in terms of storage height, weight capacity and speed. The company is continually looking for ways to increase productivity and improve safety within its cold storage environment. The company needed to determine the right forklift fleet for the new facility while maximizing the space in its freezer.

SOLUTION

The Crown RM 6000 gave the company the advantage they needed. The truck’s MonoLift® mast offers unsurpassed rigidity and can reach 505 inches and deliver up to 1,000 pounds more capacity at height. The truck is equipped with forks that travel upward at a pace of 160 feet per minute. Elevated load sway is minimized through the use of a closed cross-section mast construction. Operators experience significantly reduced mast sway and twisting resulting in more confidence, less time waiting for the mast to steady and more time moving loads. The RM 6000 with MonoLift mast offers the best in operator visibility and performance. With a clear window of visibility at height, eye level and ground level, operators can move loads efficiently while reducing the risk of damage to product, racks, and trucks.

RESULT

- **Exceeded productivity expectations by enabling the company to handle 50 percent more volume in a single shift** — easily handled the company’s increased volume with its current fleet.
- **Improved safety** with the MonoLift mast that offers the best in operator visibility with clear sight lines at any height.
- **Increased storage capacity** with the unsurpassed rigidity of the MonoLift mast enabling the company to lift heavier pallets higher and faster.
