The most important component is you.

This operator manual has information for all these models. Some illustrations and information may not apply to your truck.

RR 3000 RD 3000 RS 3000
3500 3500 3500
You Must be Trained

IT'S THE LAW, YOU MUST BE TRAINED
Federal law states that only trained and authorized operators are permitted to operate a powered industrial truck and that your employer must train operators in the safe operation of powered industrial trucks. (OSHA §1910.178)

Do not operate this truck in your work place until you have been trained and certified by your employer.

You could be killed or seriously injured if you are not adequately trained for lift truck operation!

A MOVING VEHICLE CAN BE DANGEROUS
You or others around you can be seriously injured or even killed if you are not careful or don't know how to use this truck correctly.

Do not operate this truck unless you are trained and authorized.

Read and obey all warnings and instructions in this Manual* and on the truck.

Make sure the truck is in good working order.

Head, arms, hands or legs outside the operator area can be pinned or crushed whenever the truck is moving. Stay within the operator area and stop completely before getting off.

A dockboard can move or drop while you are on it. Or you could drive off a dock. Falls from docks or dockboards can cause serious injury or even death. Make sure you are safe.

You can be trapped or crushed by driving the operator area under racks or other objects. Look where you are going.

* Additional copies of this Operator Manual and all Truck Labels can be obtained from Crown Equipment Corporation, New Bremen, Ohio 45869 U.S.A.
Know the Hazards

DRIVE CAREFULLY
- Keep your hands on the controls and feet on the pedals. Keep your entire body in the operator area.
- Never stick a foot or any part of your body outside the operator area, no matter how slow the truck is moving. You cannot stop 8000 pounds with any part of your body. A foot or hand caught between the truck and a fixed object will be crushed or even cut off.
- Stay away from the edge of docks and ramps. Make sure dockboards are secure. Check that trailer wheels are chocked. You could be seriously injured or even killed in a fall from a dock or dockboard.
- Keep your truck under control at all times. Drive at a speed that allows you to stop safely. Be even more careful on slippery or uneven surfaces. Do not drive over objects on the floor.

LOOK WHERE YOU’RE DRIVING
- Always be alert to the area around you and watch where you are driving. You could be pinned or crushed by objects intruding or poking into the operator area.

Know the Hazards

AVOID FALLS AND TIPOVERS
Tipovers are very serious accidents, you can be crushed or even killed. The best way to prevent injury is to know where you are at all times and follow the rules of safe truck operation. Unless you can safely jump completely clear of the falling truck there is no sure way to avoid injury during a tipover or a drop from a dock or dockboard.
- Be extremely careful when working around docks, dockboards and trailers.
- Travel with the load or forks close to the ground and tilted back. Watch for overhead obstructions. Perform all truck movements smoothly and at a speed that will give you time to react in an emergency.
- An unloaded truck can tip over also. You must be just as careful using an unloaded truck as you are using a loaded one.

USE YOUR TRUCK SAFELY
- Keep your hands and feet away from all moving parts such as masts, chains, forks or wheels. Make sure the overhead guard and load backrest are in place.
- Never stand on or under the forks, or allow anyone else to stand on or under them. The only way to lift people is with an approved platform. Never allow passengers on the truck. There is no safe place for them.
- Before you leave your truck:
  - Come to a complete stop.
  - Lower the forks to the floor.
  - Shut the truck off with the key or power disconnect.

What's in it for You?

WHAT'S IN IT FOR YOU?
The better you understand your truck and how to use it, the better and safer operator you can be. Here are some guides to using this manual.

QUICK LOCATORS
In addition to the "Contents" page you can use page headings to find topics. Some pages also have a picture of the truck in the corner showing features or functions covered on that page.

"KNOW THE HAZARDS"
Watch for and read these special blocks. You will find information about possible safety hazards and how to avoid them.

HOW-TO-DRAWINGS
On many pages you will find pictures as well as text to help you understand how to use your truck safely and productively.

Capacity & Load Center

Know the Hazards

What's in it for You? 6
NARROW-AISLE TRUCKS
Your narrow-aisle rider truck lifts, moves and stacks loads. It is designed to work in warehouses built with narrower aisles to give maximum storage.

YOUR LIFT TRUCK IS NOT AN AUTOMOBILE
With a load it may weigh as much as 3 automobiles.
• You don’t steer the same.
• You don’t brake the same.
• You don’t accelerate the same.

FORK FUNCTIONS, STANDARD AND OPTIONAL
Available fork functions include Raising and Lowering the forks, Tilt (up or down), and Reach (in or out). Included may also be Sideshift (right or left), or Fork Positioner (in or out). Your company has decided which features are needed in your work area and should train you how to use them.

HOW TO DRIVE YOUR TRUCK
Your truck is designed with a tilted floorboard and padding in the operator area. You drive your truck by standing sideways and leaning back against the pad. This, along with your hands on the controls and feet on the pedals, gives you both comfort and stability. Plus you can see and travel in either direction simply by turning your head.

GIVE YOUR BODY A BREAK
Take advantage of stop time. Get off the truck and flex your arms and legs. Staying alert will help you be a better and safer driver.

BUILT TO STANDARDS
This truck was designed and built to current industry and government standards and guidelines. For more information see the following:
• American National Standards Institute (ASME) B56.1
• Occupational Safety and Health Act (OSHA) §1910.178
• Underwriters Laboratory (UL) 583
• National Fire Prevention Association (NFPA) 505
Capacity & Load Center

WHAT IS YOUR TRUCK CAPACITY?
Capacity is the load (including pallet or container) that can be lifted to a given height at a given load center. See the capacity plate on your truck.

WHAT IS LOAD CENTER?
Load center is the distance from the load backrest or vertical face of the fork to the center of an evenly distributed load.

KNOW THE HAZARDS

Know the hazards before handling loads.

KNOW YOUR LOAD
Do not exceed the capacity shown on your truck's capacity plate. Be careful when handling long, high or wide loads. Do not handle unstable loads.

EXCEEDING TRUCK CAPACITY CAN CAUSE AN ACCIDENT
Know the capacity of your truck as shown on your capacity plate. Pay attention to:
• Weight of load
• Load center
• Lift height

HYDRAULIC OPERATIONS CAN AFFECT STABILITY
The load center moves as the load moves, such as when using reach, tilt or sideshift. Be careful when using these fork functions. Perform the operations smoothly and only when the truck is standing still. (This also applies to any attachments your truck may have.)

CENTER THE LOAD
Your truck could tip over if a load is shifted to the front or side of a pallet or container. Make sure your load is evenly distributed and centered over the forks.

LOADS MUST BE EVENLY DISTRIBUTED
Your truck could tip over, in any direction, if a load is shifted to the front or side of a pallet or container.
Capacity Plate

CAPACITY PLATE INFORMATION
The capacity plate is on a console in the operator area. It contains:
- Serial number
- Capacity information (load, load center and lift height)
- Truck type (a fire safety rating)
- Truck weight with battery (does not include load)
- Attachment information (if any)

READING YOUR CAPACITY PLATE
Capacity may be reduced as lift height (A) increases.
For example: On the sample plate, 3000 lb. can be lifted to 275 in. But above 275 in., to 321 in., capacity is reduced from 3000 to 2000 lb.

Capacity is reduced as load center (B) increases.
For example: On the sample plate, 3000 lb. can be lifted if the load center is 24 in. But if the load center is increased to 34 in., capacity is reduced from 3000 to 2100 lb.

CAUTION
You may not increase capacity if load center is less than shown on your capacity plate.

Know the Hazards

TRUCK TYPE
Some truck types are not permitted in areas where there are fire hazards. Watch for marked areas. For example: You must not drive a type E or ES truck into an area restricted to EE or EX trucks.

TRUCK WEIGHT
Dockboards, elevators and some floors have limited capacity. Check your capacity plate for the weight of your truck. Remember to add the weight of the load you have on the forks.

ATTACHMENT DATA
If an attachment on your truck does not match the information given here on your capacity plate, don't operate your truck. Your capacity plate may be wrong. Report the problem.

OTHER LIFT HEIGHTS AND LOAD CENTERS
Contact Crown for capacities at lift heights or load centers not given on your capacity plate.
Display Panels

Fork Function Information
You will find hydraulic function (fork function) information on both the overhead display and the console display.

Fork Functions
Checking either display tells you which hydraulic or fork function you have selected.

Additional Overhead Display Information

Message Display
If your truck won’t work, check display for instructions.

<table>
<thead>
<tr>
<th>Display</th>
<th>What to do</th>
</tr>
</thead>
<tbody>
<tr>
<td>KEY</td>
<td>Turn the key to the TEST position.</td>
</tr>
<tr>
<td>PWR</td>
<td>Step on the POWER-ON pedal.</td>
</tr>
<tr>
<td>BRAK</td>
<td>Step on the BRAKE pedal.</td>
</tr>
</tbody>
</table>

Battery Charge Display
The green bars show how much charge is left. Have the battery changed or recharged when you see a flashing yellow light.

Wrench Light
A red light means something needs to be fixed. Report the trouble to your supervisor, even if the truck seems to be working OK.
Power On & Off

KEY SWITCH
- Turn the key sideways to TEST (yellow dot).
  Check that all display lights are working.
- Let go of the key and it will return to ON (green dot).
- When leaving the truck, turn the key vertical to OFF (red dot) to shut the truck off.

POWER-ON PEDAL
Step down on the right pedal. If the key is turned ON, the steering pump will start running and you can operate the truck.
Note: You must keep the power-on pedal down for power steering to work.

POWER DISCONNECT
Push the Power Disconnect in the direction of the forks to disconnect the battery and cut all power.
Always use the Power Disconnect any time the truck isn't working right. The key switch does not cut all power to the truck.
Don't use the truck if it's not working right. Report the problem.

ENTRY BAR
Always keep your feet in the operator area and clear of the entry bar.
If you put your foot on the entry bar while traveling, the alarm will sound a warning and travel speed is limited to 1 1/2 MPH. Plugging is reduced. Braking is not affected.
Below 1 1/2 MPH the alarm will still sound a warning, but travel speed, plugging and braking are not affected.

Know the Hazards

WARNING
Never use a battery without the block in place.

BEFORE CONNECTING THE BATTERY
Make certain the block (Crown #77034) is bolted to the back of the battery half of the connector. Without that block the Power Disconnect won't work. In an emergency you will not be able to cut power to the truck.
**Foot Brake**

**BRAKES OFF**
Step all the way down on the left pedal. The brakes are now "off" and you can travel.

**Note:** Slowing or stopping the truck by plugging (see page 21), requires power to the drive motor. You must have the brake pedal all the way down for plugging to work.

**BRAKES ON**
Lift your left heel. Let the left pedal rise until you have the desired braking force. Let the pedal come up all the way for full braking.

As the brake pedal starts to lift, power is cut to the drive motor. Remember, without power to the drive motor you can’t use plugging.

---

**Know the Hazards**

**WATCH YOUR FEET**
Keep your feet inside the truck and on the pedals at all times. This truck weighs about 4 tons or 8000 pounds unloaded. You cannot stop or even slow down 8000 pounds with your foot or any part of your body, no matter how slow the truck is moving. A foot or hand caught between the truck and a wall, post or any fixed object will be crushed or even cut off.

**MAKE SURE YOUR BRAKES WORK**
Test the brakes on your truck at the start of each shift. Know the distance it takes to stop before you start working.

If at any time the stopping distance is too long for you to stop safely, don’t drive the truck. Report any problem to your supervisor.
TRAVEL, POWER UNIT FIRST
Pull the multi-function handle toward you to travel in the direction of the power unit (power unit first).
The farther you pull the handle from the neutral position, the faster the truck will travel.

TRAVEL, FORKS FIRST
Push the multi-function handle away from you to travel in the direction of the forks (forks first).
The farther you push the handle from the neutral position, the faster the truck will travel.

PLUGGING
Plugging is another way to slow down or stop your truck.
While the truck is moving, in either direction, pull or push the multi-function handle through neutral to the opposite direction of travel. This will not hurt your truck.

HORN
Press the blue button on the multi-function handle to sound the horn. Use it to warn pedestrians and other drivers.

Know the Hazards

PLUGGING VS. BRAKING
Of the two, the foot brake is designed to stop the truck in the shortest distance. Use the foot brake in an emergency, on ramps or in busy areas.

YOU CAN'T HAVE BOTH
Plugging works only when you have the brake pedal all the way down. When the brake pedal begins to lift, power is cut to the drive motor and you will not be able to plug.
LIFT TRUCKS ARE NOT LIKE AUTOMOBILES
Your lift truck does not steer or drive like an automobile. Be sure you are trained to operate this truck. Drive slowly until you get used to the steering and all other controls.

STEERING AND DRIVING
You will need to drive your truck both in the direction of the forks (forks first) and also away from the forks (power unit first or forks trailing). Steering is not the same in both directions. Be careful.

SIMILAR TRUCKS CAN BE DIFFERENT
This style truck can be built with one of two different types of steering. Your company has selected the type which is best for your work area.
Caution: If you ever drive a different truck, even one that looks just like yours, be careful. The steering may be different (see pages 25 and 26).

\[!] Know the Hazards

POWER UNIT SWING
Be careful turning while traveling forks first. The power unit will swing wide in the opposite direction. Make sure you have clearance, and watch out for people in the area.

SLOW DOWN FOR SPILLS OR WET FLOORS
Powder or liquid spills can cause slippery floors. Slow down or you could lose control of steering and braking. Be careful and allow for a longer stopping distance.

Don’t run over objects on the floor.
**Two Types of Steering**

**THERE ARE TWO TYPES OF STEERING**
This style truck can be built with one of two different types of steering. Your company has selected the type which is best for your work area.

**Caution:**
- Don’t drive if you have not been trained.
- Your truck does not steer like an automobile.
- Drive slowly until you get used to the truck.
- Trucks that look like yours may steer differently.

1. **REAR DIRECTIONAL STEERING** *(Sometimes called Reverse Steering.)*
   Shows direction truck will turn when steering handle is turned clockwise.

2. **FRONT DIRECTIONAL STEERING** *(Sometimes called Forward Steering.)*
   Shows direction truck will turn when steering handle is turned clockwise.
AVAILABLE FORK FUNCTIONS
These include Raising and Lowering the forks, Tilt (up or down), and Reach (in or out). They may also include Sideshift (right or left), or Fork Positioner (in or out). Use these fork functions when you move, put away or take down loads.

RAISE/LOWER
When you lift up or push down on the multi-function handle you are in the Raise/Lower function unless you first select a different function.

SELECTING FORK FUNCTION
Press or "click" the orange button on the multi-function handle to select the hydraulic function you want. Check which function you have selected by looking at the lighted displays.

Note:
- You are always in the Raise/Lower function when you turn the truck on.
- You must have the handle in neutral to select or change functions.

LIFT MULTI-FUNCTION
Select a function. Lift the multi-function handle up and you'll get the fork action shown by the lighted symbol in the top row of the displays.
For example: If the Raise/Lower symbols are lit, lift the handle and the forks will raise. If the Tilt symbols are lit, the forks will tilt up when you lift the handle.

The further you lift the handle up, the faster the movement will be.

NEUTRAL
As you finish a function movement and return the handle to neutral you either:
1. Release the selector button to automatically return to the Raise/Lower function.
2. Hold the button in to remain in the fork function you selected.

PUSH DOWN MULTI-FUNCTION
Select a function. Push the multi-function handle down and you'll get the fork action shown by the lighted symbol in the bottom row of the displays.
For example: If the Raise/Lower symbols are lit, push the handle down and the forks will lower. If the Tilt symbols are lit, the forks will tilt down when you push the handle down.

The further you push the handle down, the faster the movement will be.
Daily Safety Check

CHECK YOUR TRUCK BEFORE STARTING WORK
You must make sure your truck is safe to use.

1. Walk around your truck and check it over.
   • Check to make sure the battery is charged, water level
     is OK and vent caps are in place. Don't use an open
     flame to check the battery.
   • Make certain the battery retainers on both sides of the
     truck are properly installed.
   • See that all wheels are in good condition.
   • Clean the safety shield.
   • Check that both forks are secure and not bent, cracked
     or badly worn.
   • Inspect lift chains for damage.
   • See that the load backrest and overhead guard are in
     place and fastened.
   • Look under the truck for signs of hydraulic leaks.
   • Turn the key to TEST (yellow dot). See that all display
     lights are working. Try the horn.
   • Make sure the power disconnect works.

2. Test drive your truck in an uncongested area.
   • Try all the hydraulic functions.
   • Check that the steering is easy and smooth.
   • Drive the truck slowly in both directions.
   • Drive through the full speed range in both forward
     and reverse.
   • Check braking and plugging distances in forward
     and reverse. Load size and floor conditions can affect
     these distances.
   • Know the distance it takes to stop before you start
     working. If the braking distance is too long to stop
     safely, don't drive the truck.

If anything doesn't look or feel right, don't drive the truck.
Report the problem.

You can get checklist forms from your Crown dealer
(part no. OF-3772). Used properly, this checklist can alert
service people to needed repairs.
MAKE SURE YOU ARE READY TO DRIVE

• Do not use this truck unless you are trained and authorized.

• Be certain you understand how your truck works and the hazards that go with it. Don’t drive the truck if you have any doubts.

• Know the capacity of your truck (Load Weight, Load Center and Lift Height).

• Some trucks are not allowed in areas where there are fire hazards. Be certain your truck is the correct fire safety type for the area.

• Make sure your hands and shoes are clean and dry, and your clothing is proper for the job.

MAKE SURE YOUR TRUCK IS READY

• Inspect your truck before using it (see pages 29 and 30). If it’s not working right, or something is broken, report the problem. Don’t use the truck.

• In an open area, test the brakes and piloting. Check at a slow travel speed first, then a faster one. Know the distance it takes to stop before you start work.

DRIVE CAUTIOUSLY, BE ALERT

• Never stick a foot or any part of your body outside the operator area, no matter how slow the truck is moving. You cannot stop 8000 pounds with any part of your body. A foot or hand caught between the truck and a fixed object will be crushed or even cut off.

• Keep your hands on the controls and your feet on the pedals.

• Travel in the direction that gives you the best view. Look where you are going and slow down in congested areas.

• Slow down for wet or slippery floors. Don’t run over things.

• Travel with the forks close to the ground, retracted and tilted up. Place the load against the load backrest (vertical face of the forks).

• Look where you are going before you change direction of travel.

• See that you have room to drive and turn. Always check for overhead objects. Watch out for power unit swing.

• Slow down when making turns.

• Avoid sudden movement of controls. Learn to use them smoothly at a moderate, even rate.

• Check clearances before raising or lowering the forks or load.

• Be extra careful if you must use your truck in an area where there is a risk of falling objects.

Continued next page...
**WATCH OUT FOR OTHER PEOPLE**

- Slow down. Yield or stop for pedestrians. Use your horn when you come to a crosswalk or intersection.
- Be careful that you don't pin or crush someone. *For example: Never drive your truck toward anyone standing in front of a fixed object.*
- Never allow passengers on your truck.
- Keep others away from your truck while you're working. Don't ever allow anyone on or under the load or forks.
- Don't let anyone use your truck unless they are trained and authorized.
- Never lift anyone with the forks unless they are using an approved platform. Even then use extreme caution:
  - Use a securely attached and approved safety platform.
  - Make certain lifting mechanism is operating properly.
  - Have load backrest vertical (never tilt when elevated).
  - Make certain truck is in neutral and brake is applied.
  - Lift and lower slowly.
  - Watch for overhead obstructions.
- Be sure you can see and hear the person being lifted.
- Never transport anyone on the platform from one location to another.

**AVOID FALLS AND TIPOVERS**

- Stay away from the edge of docks and ramps.
- Check that bridgeplates and dockboards are secure. Be certain that either the trailer wheels are chocked or the trailer is locked to the dock. Check capacities. Be sure your truck, with load, isn't too heavy for where you are driving.
- Make sure the load you are moving is stable. Spread the forks as far as you can and center the load. Insert the forks as far under the load as you can. Be even more careful with long, high or wide loads. They can be less stable.
- Use minimum fork tilt to pick up or place a load. When lifting or lowering outside a rack, keep the load backrest vertical or tilted back slightly.
- When moving loads on grades or ramps, drive with your forks pointed upgrade. Without a load, drive with forks downgrade. Slow down, and don't turn on grades or ramps.

**LEAVING YOUR TRUCK**

- Stop your truck completely before getting off.
- Lower the forks to the floor. Turn the truck off or disconnect the battery.
- Avoid parking on inclines. But if you must, block the wheels of your truck.
Battery Maintenance

When you install or change batteries:
- Turn the truck OFF. Check that all controls are in neutral.
- Make certain you use the correct size and weight battery. Never operate a truck that has an underweight or undersize battery installed.
- Use a roller stand to install or remove a battery. Make sure the roller stand is the same height as the rollers in the truck’s battery compartment. Also make sure the roller stand is at least as long as your battery.
- Never let anything metal touch the top of the cells. You could cause sparks or do damage to the battery. Use an insulator (such as plywood) when necessary.
- Use an approved spreader bar to place a battery on, or remove it from, the roller stand. Make sure you adjust the spreader bar hooks to fit the battery.

After installing your battery:
- Replace the battery retainer. Make certain the retainers on both sides of the truck are in place.
- Be sure the block #77034 is bolted to the back of the battery half of the connector.
- Connect the battery. Turn the truck ON and check truck operation.

Know the hazards:

DANGER

Batteries produce explosive gas. Do not smoke, use open flame, or create an arc or sparks near this battery. Ventilate well in enclosed areas and when charging.

Batteries contain Sulfuric Acid which causes severe burns. Do not get in eyes, on skin, or clothing. In case of contact, flush immediately. Get medical attention if your eyes are affected.

WARNING

Minimum battery size allowed
60.00 x 00.00
Undersize Battery can affect truck handling and stability. You could have an accident. Use correct battery.

Truck batteries can be dangerous:
- Your truck battery produces fumes that can explode. It also contains acid that could burn or disfigure you.
- Do not try to install, remove, charge or service your truck battery unless you are trained and authorized.
- Never smoke or use an open flame around batteries.
- Your company should provide an area where it is safe to work on batteries. Use that area for all battery work.
- Use protective equipment such as gloves, eye shields, aprons, etc.

Battery size:
Make certain you use the correct size and weight battery. Never operate a truck that has an underweight or undersized battery installed.
Know the Hazards

BEFORE CHARGING YOUR TRUCK BATTERY
- Charge the battery only in areas designated for that use.
- See that the battery cells are filled to the proper level. Never use an open flame to check the battery.
- Make certain the charger is the same voltage and amperage as your battery.
- Read the battery charger instructions.
- Be sure the charger is turned OFF before connecting the battery to the charger. Otherwise you might create a spark which could cause the battery to explode. Also, make sure the truck key switch is turned off and all controls are in the off position.

BEFORE CONNECTING YOUR BATTERY
Make certain the block (Crown #77034) is bolted to the back of the battery half of the connector. Without that block the Power Disconnect won’t work. In an emergency you will not be able to cut power to the truck.

Warning Labels

Each warning label on your truck is important
Read and obey all of them to protect yourself and others.
