This operator manual has information for all models of RR5000S series plus some options and accessories. Some of the illustrations and information may not apply to your truck.

The most important component is you.
You Must be Trained

It’s the law, you must be trained and certified to operate this truck. (OSHA §1910.178, Rev. 1999)

You or others around you can be seriously injured or even killed if you don’t use this truck correctly.

Read and obey all warnings and instructions in this Manual* and on the truck.

Head, arms, hands, legs or feet outside the operator area can be pinned or crushed whenever the truck is moving. Stay within the operator area and stop the truck completely before getting off.

However, tipovers and falls from docks can cause serious injury or even death. Immediately exit and move away from the truck in these emergencies.

You can be trapped or crushed by driving the operator area under racks or other objects. Look where you are going.

Inspect your truck before starting work, make sure it is in good working order.

* Additional copies of this Operator Manual and all Truck Labels can be obtained from Crown Equipment Corporation, New Bremen, Ohio 45869 U.S.A.

Federal law states that only properly trained operators are permitted to operate a powered industrial truck and that your employer must train you and certify that you are qualified to operate this powered industrial truck. (OSHA §1910.178, Rev. 1999)

Do not operate this truck in your work place until you have been trained and certified by your employer.

You could be killed or seriously injured if you are not adequately trained for lift truck operation!
Protect Yourself

Know the Hazards

DRIVE CAREFULLY
- Keep your hands on the controls and feet on the pedals/pad. Keep your entire body in the operator area.
- Never stick a foot or any part of your body outside the operator area, no matter how slow the truck is moving. You cannot stop 3630 kg (8000 pounds) with any part of your body. A foot or hand caught between the truck and a fixed object will be crushed or even cut off.
- Stay away from the edge of docks and ramps. Make sure dockboards are secure. Check that trailer wheels are chocked. You could be seriously injured or even killed in a fall from a dock or dockboard.
- Keep your truck under control at all times. Drive at a speed that allows you to stop safely. Be even more careful on slippery or uneven surfaces. Do not drive over objects on the floor.

LOOK WHERE YOU’RE DRIVING
- Always be alert to the area around you and watch where you are driving. You could be pinned or crushed by objects intruding or poking into the operator area.

AVOID FALLS AND TIPOVERS
Falls from docks and tipovers are very serious accidents; you can be crushed or even killed. Immediately exit and move away from the truck in these emergencies.

Note: This is not like sit-down rider trucks, where it is recommended that the operator stay with the truck. The best way to prevent injury is to know where you are at all times and follow the rules of safe truck operation.
- Be extremely careful when working around docks, dockboards and trailers.
- Travel with the load or forks close to the ground and tilted back. Watch for overhead obstructions. Perform all truck movements smoothly and at a speed that will give you time to react in an emergency.
- An unloaded truck can tip over also. Be just as careful using an unloaded truck as you are using a loaded one.

USE YOUR TRUCK SAFELY
- Keep your hands and feet away from all moving parts such as masts, chains, forks or wheels. Make sure the overhead guard and load backrest are in place.
- Never stand on or under the forks, or allow anyone else to stand on or under them. The only way to lift people is with an approved platform. Never allow passengers on the truck. There is no safe place for them.
- Before you leave your truck:
  - Come to a complete stop and lower forks to the floor.
  - Shut the truck off with the key or power disconnect.

What's in it for You?

WHAT'S IN IT FOR YOU?
The better you understand your truck and how to use it, the better and safer operator you can be. Here are some guides to using this manual.

Quick Locators
In addition to the "Contents" page you can use page headings to find topics. Some pages also have a picture of the truck in the corner showing features or functions covered on that page.

"Know the Hazards"
Watch for and read these special blocks. You will find information about possible safety hazards and how to avoid them.

How-to-Drawings
On many pages you will find pictures as well as text to help you understand how to use your truck safely and productively.
NARROW-AISLE TRUCKS
Your narrow-aisle rider truck lifts, moves and stacks loads. It is designed to work in warehouses built with narrower aisles to give maximum storage.

YOUR LIFT TRUCK IS NOT AN AUTOMOBILE
With a load it may weigh more than 3 automobiles.
• You don't steer the same.
• You don't brake the same.
• You don't accelerate the same.

FORK FUNCTIONS, STANDARD AND OPTIONAL
Raising and Lowering the forks, Tilt (up and down), and Reach (in and out) are standard on the RR and RD models. Included on all models may also be Sideshift (right and left), or other options such as Rack Height Select. Your company has decided which features are needed in your work area and should train you how to use them.

HOW TO DRIVE YOUR TRUCK
Your truck is designed with a tilted floorboard and padding in the operator area. Some models include a folding seat. You drive your truck by standing or sitting sideways and leaning back against the pads. This, along with your hands on the controls and feet on the pedals/pad, gives you stability. The controls are located so you can vary your body position for best comfort and visibility.

GIVE YOUR BODY A BREAK
Take advantage of stop time. Flex your arms and legs. Staying alert will help you be a better and safer driver.

BUILT TO STANDARDS
This truck was designed and built to current industry and government standards and guidelines. For more information see the following:
• American National Standards Institute (ANSI/ITSDF) B56.1
• Occupational Safety and Health Act (OSHA) §1910.178, Rev. 1999
• Underwriters Laboratory (UL) 583
• National Fire Prevention Association (NFPA) 505
Lift Truck Parts

- Mast
- Overhead Guard
- Load Backrest
- Operator Cushion
- Flip-Down Perch
- Folding Seat (on some models)
- Battery
- Fork
- Load Wheels
- Drive Wheel
- Caster Wheel
- Power Disconnect
- Multi-Task Handle
- Key Switch
- Display Panel
- Switch Panel
- Steering Tiller

PEDESTAL PEDALS:
- Brake Pedal
- Center Brake Pedal
- Sensor Pedal

FLOOR PEDALS:
- Brake Pedal
- *Sensor Pad

* Earlier model trucks are equipped with a pedal instead of a sensor pad on the floorboard.
Capacity & Load Center

WHAT IS YOUR TRUCK CAPACITY?
Capacity is the load (including pallet or container) that can be lifted to a given height at a given load center. See the capacity plate on your truck. Make certain you use the correct units of measure.

WHAT IS LOAD CENTER?
Load center is the distance from the load backrest or vertical face of the forks to the center of an evenly distributed load.

LOADS MUST BE EVENLY DISTRIBUTED
Your truck could tip over, in any direction, if a load is shifted to the front or sides of a pallet or container.

Know the Hazards

KNOW YOUR LOAD
Do not exceed the capacity shown on your truck's capacity plate. Be careful when handling long, high or wide loads. Do not handle unstable loads.

EXCEEDING TRUCK CAPACITY CAN CAUSE AN ACCIDENT
Know the capacity of your truck as shown on your capacity plate. Make certain you use the correct units of measure. Pay attention to:
• Weight of load
• Load center
• Lift height

CENTER THE LOAD
Your truck could tip over if a load is shifted to the front or sides of a pallet or container. Make sure your load is evenly distributed, stable and centered over the forks.

HYDRAULIC OPERATIONS CAN AFFECT STABILITY
Be careful when using reach, tilt, sideshift or other operations. Remember that anytime the forks move, the load moves also. This can affect stability. Perform all hydraulic operations smoothly. (This also applies to any attachments your truck may have.)
Capacity Plate

**CAPACITY PLATE INFORMATION**
The capacity plate is on a console in the operator area. It contains:
- Serial number
- Capacity information (load, load center and lift height)
- Truck type (a fire safety rating)
- Truck weight with max. battery (does not include load)
- Attachment information (if any)
- Mast collapsed height

**READING YOUR CAPACITY PLATE**
Capacity may be reduced as lift height A increases. For example: On the sample plate, 2040kg (4500 lb) can be lifted to 6350mm (250 in). But above 6350 (250), to 7620 (300), capacity is reduced from 2040 (4500) to 1700 (3750).

Capacity is reduced as load center B increases. If you must handle loads with longer load centers, an additional capacity plate will show the reduced capacities.

**CAUTION**
You may not increase capacity if load center is less than shown on your capacity plate.

**Note:** ANSI B56.1 requires that all data be shown first in Metric units and then USA units.

**OTHER LIFT HEIGHTS & LOAD CENTERS**
Contact Crown for capacities at lift heights or load centers not given on your capacity plate.

**TRUCK WEIGHT**
Dockboards, elevators and some floors have limited capacity. Check your capacity plate for the weight of your truck. Remember to add the weight of the load you have on the forks.

**TRUCK TYPE**
Some truck types are not permitted in areas where there are fire hazards. Watch for marked areas. For example: You must not drive a type E or ES truck into an area restricted to EE or EX trucks.

**ATTACHMENT DATA**
If an attachment on your truck does not match the information given here on your capacity plate, don't operate your truck. Your capacity plate may be wrong. Report the problem to your supervisor.

**MAST COLLAPSED HEIGHT**
Some work areas may have overhead obstructions. Mast Collapsed Height is the minimum height your truck can clear, providing the backrest and load are lowered below the top of the mast.
**Display Panel standard**

**WRENCH LIGHT**
A yellow light means something needs to be fixed. Report the trouble to your supervisor.

**STANDARD MESSAGE DISPLAY**
See page 17 for typical messages.

**ERROR LIGHT**
A yellow light means you have tried to perform an operation that is not permitted. Check the message display.

**BATTERY CHARGE DISPLAY**
The green bars show how much charge is left. Have the battery changed or recharged if the yellow light is flashing.

**FORK HEIGHT LIGHT (see Caution)**
A yellow light means the load backrest is higher than the collapsed height of the mast. Make certain the load and load backrest will clear any obstructions above you.

The yellow light will flash and alarm will "beep" if you travel faster than the load positioning speed (2.4 kmph, 1.5 MPH) while the load backrest is above the collapsed height of the mast.

**Display Panel with options**

**SERVICE AND OPTION BUTTONS**
See your Service Manual for instructions.

**EXPANDED MESSAGE DISPLAY**
See page 17 for typical messages.

ADDONAL SERVICE BUTTONS
See your Service Manual for instructions.

**FORKS DOWN LIGHT (see Caution)**
The green light means the mast is at its minimum collapsed height. Make certain the load and load backrest will also clear any overhead obstructions.

**CAPACITY DATA MONITOR (see Caution)**
- **Fork height lights:** A yellow fork will light to show which lift zone the forks are in. If any of these lights are on, it means the load backrest is higher than the collapsed height of the mast. Make certain the load and load backrest will clear any obstructions above you.
  - The yellow light will flash and alarm will "beep" if you travel faster than the load positioning speed (2.4 kmph, 1.5 MPH) while the load backrest is above the collapsed height of the mast.
- **Fork height lights:** The green bars will light to show how high, or to which lift zone you can raise a load.
- **Overload warning:** If the load is too heavy for the lift zone the forks are in, the alarm will "beep" and the message display will read **CHECK LOAD**.

Caution: All information displayed by the fork position lights and/or the Capacity Data Monitor is for reference only. You must always be alert to load center, load distribution, load height and load weight. You must also be aware when the load or load backrest extends above the top of the mast, and how much overhead clearance is needed.
If your truck slows down or won't work, check the message display for instructions.

**AUDIO ALARM**
Anytime you hear a "beep", something is wrong. Check the message display.

**MESSAGE DISPLAY FOR STANDARD TRUCK**
If your truck slows down or won't work, check the message display for instructions.

<table>
<thead>
<tr>
<th>Standard Message Display</th>
<th>What To Do</th>
<th>Optional Expanded Message display</th>
</tr>
</thead>
<tbody>
<tr>
<td>TEST</td>
<td>Check that the alarm, message display and all lights are working.</td>
<td>LAMP TEST</td>
</tr>
<tr>
<td>FOOT</td>
<td>Both feet must be on the correct pedals/pad.</td>
<td>LEFT OR RIGHT PEDAL</td>
</tr>
<tr>
<td>HAND</td>
<td>Return the multi-task control handle to neutral.</td>
<td>CENTER HANDLE</td>

**ADDITIONAL MESSAGES FOR CAPACITY DATA MONITOR OPTION**
If your truck has this option, the following messages can also be displayed.

<table>
<thead>
<tr>
<th>What To Do</th>
<th>Optional Expanded Message display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Load is too heavy for the lift zone you are operating in.</td>
<td>CHECK LOAD</td>
</tr>
<tr>
<td>Make sure the forks are not tilted all the way up or down. If the problem continues, notify your service department or supervisor.</td>
<td>MONITOR DISABLED</td>
</tr>
</tbody>
</table>

**SWITCH PANEL**

- **DOME LIGHT SWITCH**
- **FAN SWITCH** (optional)
- **WORK LIGHT SWITCH** (optional)
- **RAISE CUTOUT OVERRIDE SWITCH** (optional)

Your truck may be equipped with automatic cutout of raise at selected lift heights.

To raise past the cutout height, push the optional Raise Cutout Override switch while, at the same time, lifting the multi-task control handle (see page 29).

**Caution:** Make certain the load and load backrest will clear all overhead obstructions.
Adjusting the Seat & Controls

**ADJUSTABLE SEAT & CONTROLS**
Some models of the RR 5000S Series are equipped with a folding seat, flip-down perch and adjustable controls. 
Before using your truck, adjust the controls, backrest and seat to their most comfortable operating positions.

**Caution:** Do not make any adjustments while the truck is moving.

**ADJUSTING THE STEERING TILLER HEIGHT**
Push the yellow button to the right of the steering column, and move the steering tiller to the most comfortable operating position.

**ADJUSTING THE MULTI-TASK CONTROL AND SEAT HEIGHT**
Push down on the Orange lever next to the seat, and raise or lower the backrest, armrest and seat unit to the most comfortable operating position.

**FLIP-DOWN PERCH**
Flip the perch down to the horizontal position for extra support in the standing position.

Flip the perch up to the vertical position when it is not needed.

**FOLDING SEAT**
Lift the front edge of the seat up until it latches in the horizontal position.

Squeeze the handle under the front of the seat to lower the seat to the vertical position.
KEY SWITCH

• To start the truck, turn the key clockwise to TEST (yellow dot). Check that all display lights are working.
• Let go of the key and it will return to ON (green dot). You must step on the center brake pedal on the pedestal with your left foot. This allows the truck electronics to check brake pedal operation before you drive the truck.
• When leaving the truck, turn the key counterclockwise to OFF (red dot) to shut the truck off.

FOOT PEDALS/PAD

Place your right foot on either the pedestal sensor pedal or the floorboard sensor pad*. Place your left foot on one of the left brake pedals. If the key is turned ON, the steering pump will start running and you can operate the truck.

* Earlier model trucks are equipped with a pedal instead of a sensor pad on the floorboard.

USER CODE (PIN number)

You may have to enter a user code (Personal Identification Number) before you can use the truck. Check the message display if the truck doesn’t operate.

POWER DISCONNECT

Push the Power Disconnect button to cut power to the truck.
Use the Power Disconnect to shut the truck down any time it isn’t working right. Don’t use the truck if it’s not working right. Report the problem to your supervisor.
Turn the key switch to OFF and back to ON to reconnect the battery and reset the Power Disconnect button.

ENTRY BAR

Always keep your feet in the operator area and clear of the entry bar.
If you put your foot on the entry bar while traveling, the alarm will sound and the truck will slow to a stop.
**Foot Brake**

**BRAKE OFF**
Step all the way down on either the floor brake pedal or the left pedestal brake pedal. The brakes are now "off".

**BRAKE ON**

- **Floor Brake Pedal**
  When operating with both feet on the floorboard, lift your heel or move your foot off the floor brake pedal to apply the brakes. Keep a part of your foot in contact with the floorboard.

- **Center Pedestal Brake Pedal**
  When operating with either foot on the pedestal, step on the center pedestal brake pedal to apply the brakes.

---

**Know the Hazards**

**WATCH YOUR FEET**
Keep your feet inside the truck and on the pedals/pad at all times. This truck weighs about 3630 kg (8000 pounds) even without a load on the forks. You cannot stop or even slow down that much weight with your foot or any part of your body, no matter how slow the truck is moving.

A foot or hand caught between the truck and a wall, post or any fixed object will be crushed or even cut off.

**KEEP YOUR BALANCE WHILE STANDING**
Put your hands on the controls and keep your feet on either the floorboard or the pedestal. This, along with leaning back against the cushion, gives you better stability.

**MAKE SURE YOUR BRAKES WORK**
Test the brakes on your truck at the start of each shift. Know the distance it takes to stop before you start working.

If at any time the stopping distance is too long for you to stop safely, don't drive the truck. Report any problem to your supervisor.
Traveling & Plugging

TRAVEL, POWER UNIT FIRST
Pull the multi-task handle toward you to travel in the direction of the power unit (power unit first).
The farther you pull the handle from the neutral position, the faster the truck will travel.

TRAVEL, FORKS FIRST
Push the multi-task handle away from you to travel in the direction of the forks (forks first).
The farther you push the handle from the neutral position, the faster the truck will travel.

PLUGGING
Plugging is another way to slow down or stop your truck.
While the truck is moving, in either direction, pull or push the multi-task handle through neutral to the opposite direction of travel. Plugging will not hurt your truck.

HORN
Press the button on the multi-task handle to sound the horn. Use it to warn pedestrians and other drivers. Use your horn when you come to an intersection or a crosswalk.

Know the Hazards

PLUGGING VS. BRAKING
Of the two, the foot brake is designed to stop the truck in the shortest distance. Use the foot brake in an emergency, on ramps or in busy areas.
Steering & Travel

STEERING AND DRIVING
You will need to drive your truck in both the direction of the forks (forks first) and also in the direction of the power unit (power unit first or forks trailing). Steering is not the same in both directions. Be careful. Drive slowly until you get used to all the controls.

TRUCKS THAT LOOK ALIKE CAN BE DIFFERENT
This style truck can be built with one of two different types of steering. Your company has selected the type which is best for your work area.

Caution: If you ever drive a different RR Series truck, be careful. The steering may be different (see page 28).

Know the Hazards

POWER UNIT SWING
Be careful turning while traveling forks first. The power unit will swing wide in the opposite direction. Make sure you have clearance, and watch out for people in the area.

SLOW DOWN FOR SPILLS OR WET FLOORS
Powder or liquid spills can cause slippery floors. Slow down or you could lose control of steering and braking. Be careful and allow for a longer stopping distance. Don't run over objects on the floor.

Two Types of Steering

1 REAR DIRECTIONAL STEERING (Sometimes called Reverse Steering.)
Shows direction truck will turn when steering handle is turned clockwise.

2 FRONT DIRECTIONAL STEERING (Sometimes called Forward Steering.)
Shows direction truck will turn when steering handle is turned clockwise.
FORK FUNCTIONS
Standard fork functions include
Raising and Lowering the forks, Tilt (up and down),
and Reach (extend and retract).

Some optional fork functions your truck may be equipped
with are Sideshift (right or left), Rack Height Select which
allows the truck to be programmed so the forks will stop
at selected heights, and Tilt Position Assist to tilt the forks
to a programmed position.

RAISE/LOWER
Lift the multi-task handle up to raise the forks. Push down
on the handle to lower the forks.

The farther you move the multi-task handle from neutral,
the faster the forks will move.

RAISE CUTOUT OPTION
Your truck may be equipped with an automatic cutout to
prevent you from raising the forks into restricted areas.

If raise stops, check the message display. or
will show on the display if you
are at a raise cutout height. See page 18 for using the
optional Raise Cutout Override Switch.

RACK HEIGHT SELECT OPTION
This option allows a truck to be programmed so the forks
will stop at a selected height.

1. Press the UP ARROW button on the right side of the
display panel to activate the rack select option. The
message display will show if at
least one lift height has been programmed into the truck,
and your truck is equipped with this option.

2. Press the switch on the back of the multi-task handle
to scroll through the lift heights that have been programmed
into the truck. The message display will show the height
in either millimeters or inches, along with the label
number for the height.

3. Make certain the path of the forks is clear. Lift and
hold the multi-task handle. The forks will stop and
there will be a one second beep when they reach the
programmed height. Check to make certain the forks are
at the correct position before entering the rack or pallet.

Know the Hazards
CHECK THE PATH OF THE FORKS
Be just as careful raising the forks with the rack height
select option as when using manual raise. Make certain
the path of the forks is clear and free of obstacles.

Check that the forks are at the proper position to enter
the pallet, or that the pallet will clear the rack beam...
THUMB BALL
All hydraulic fork functions, other than raise & lower, are controlled by the multi-task thumb ball.

TILT UP & DOWN 🔄 🔄
Roll the thumb ball up to tilt the fork tips up. Roll the ball down to tilt the fork tips down.

TILT POSITION ASSIST OPTION 🔄 🔄
With the thumb ball in neutral, press and hold the switch on the back of the multi-task handle. Then roll the thumb ball either up or down.
If your truck is equipped with this option, the forks will go to the programmed tilt position chosen by your company for this truck.

FORK POSITION WILL VARY DEPENDING ON LOAD
The tilt of the forks and raised height of the forks will change depending on how much load is on the forks.
Always check to see that the forks are at the correct tilt position and lift height to enter a pallet, or that the pallet and load will clear the rack beams.
Be just as careful when using programmed functions as when operating the truck manually.

REACH/RETRACT 🔄 🔄
Roll the thumb ball away from you to reach (extend) the forks. Roll the ball toward you to retract the forks.
The farther you move the ball from neutral the faster the forks will move.
This motion of the thumb ball will have a second function if your truck has a sideshift option.

SIDESHIFT OPTION 🔄 🔄
With the thumb ball in neutral, press and hold the switch on the back of the multi-task handle. Then roll the ball away from you to shift the forks to the left (away from you). Roll the ball toward you to shift the forks to the right (toward you).
The farther you move the ball from neutral the faster the forks will move.

Know the Hazards

CHECK FORK AND PALLET POSITION
The fork position will vary depending on whether the forks are loaded or unloaded.
Make certain the forks are at the correct tilt position and lift height to enter a pallet, or that the pallet and load will clear the rack beams.
Daily Safety Check

CHECK YOUR TRUCK BEFORE STARTING WORK
You must make sure your truck is safe to use.

1. Walk around your truck and check it over.
   • Check to make sure the battery is charged, water level is OK and vent caps are in place. Don't use an open flame to check the battery.
   • Make certain the battery retainer is properly installed and adjusted.
   • See that all wheels are in good condition.
   • Clean the safety glass.
   • Check that both forks are secure and not bent, cracked or badly worn.
   • Inspect lift chains for damage.
   • See that the load backrest and overhead guard are in place and fastened.
   • Look under the truck for signs of hydraulic leaks.
   • Turn the key to TEST (yellow dot). See that all display lights are working.
   • Test the horn.
   • Make sure the power disconnect works.

2. Test drive your truck in an uncongested area.
   • Try all the hydraulic functions.
   • Check that the steering is easy and smooth.
   • Drive the truck slowly in both directions.
   • Drive through the full speed range in both forward and reverse.
   • Check braking and plugging distances in forward and reverse. Load size and floor conditions can affect these distances.
   • Know the distance it takes to stop before you start working. If the braking distance is too long to stop safely, don't drive the truck.

If anything doesn't look or feel right, don't drive the truck. Report the problem to your supervisor.

You can get checklist forms from your Crown dealer (part no. OF-3772). Used properly, this checklist can alert service people to needed repairs.
MAKE SURE YOU ARE READY TO DRIVE

- Do not use this truck unless you are trained and certified.
- Be certain you understand how your truck works and the hazards that go with it. Don't drive the truck if you have any doubts.
- Know the capacity of your truck (Load Weight, Load Center and Lift Height). Make certain to use the correct units of measure.
- Some trucks are not allowed in areas where there are fire hazards. Be certain your truck is the correct fire safety type for the area.
- Make sure your hands and shoes are clean and dry, and your clothing is proper for the job.

MAKE SURE YOUR TRUCK IS READY

- Inspect your truck before using it (see pages 33 and 34). If it's not working right, or something is broken, report the problem to your supervisor. Don't use the truck.
- In an open area, test the brakes and plugging. Check at a slow travel speed first, then a faster one. Know the distance it takes to stop before you start work.

DRIVE CAUTIOUSLY, BE ALERT

- Never stick a foot or any part of your body outside the operator area, no matter how slow the truck is moving. You cannot stop 3680 kg (8000 pounds) with any part of your body. A foot or hand caught between the truck and a fixed object will be crushed or even cut off.
- Keep your hands on the controls and your feet on the pedals/pad.
- Travel in the direction that gives you the best view. Look where you are going and slow down in congested areas.
- Slow down for wet or slippery floors. Don't run over things.
- Travel with the forks close to the ground, retracted and tilted up. Place the load against the load backrest (vertical face of the forks).
- Look where you are going before you change direction of travel.
- See that you have room to drive and turn. Always check for overhead objects. Watch out for power unit swing.
- Slow down when making turns.
- Avoid sudden movement of controls. Learn to use them smoothly at a moderate, even rate.
- Check clearances before raising or lowering the forks or load.
- Be extra careful if you must use your truck in an area where there is a risk of falling objects.

Continued next page...
AVOID FALLS AND TIPOVERS
• Stay away from the edge of docks and ramps.
• Check that bridgeplates and dockboards are secure. Be certain that either the trailer wheels are chocked or the trailer is locked to the dock. Check capacities. Be sure your truck, with load, isn’t too heavy for where you are driving.
• Make sure the load you are moving is stable. Spread the forks as far as you can and center the load. Insert the forks as far under the load as you can. Be even more careful with long, high or wide loads. They can be less stable.
• Use minimum fork tilt to pick up or place a load. When lifting or lowering outside a rack, keep the load backrest vertical or tilted back slightly.
• When moving loads on grades or ramps, drive with your forks pointed upgrade. Without a load, drive with forks downgrade. Slow down, and don’t turn on grades or ramps.

LEAVING YOUR TRUCK
• Stop your truck completely before getting off.
• Lower the forks to the floor. Turn the truck off or push the Power Disconnect button.
• Avoid parking on inclines. But if you must, block the wheels of your truck.

WATCH OUT FOR OTHER PEOPLE
• Slow down. Yield or stop for pedestrians. Use your horn when you come to a crosswalk or intersection.
• Be careful that you don’t pin or crush someone. For example: Never drive your truck toward anyone standing in front of a fixed object.
• Never allow passengers on your truck.
• Keep others away from your truck while you’re working. Don’t ever allow anyone on or under the load or forks.
• Don’t let anyone use your truck unless they are trained and certified.
• Never lift anyone with the forks unless they are using an approved platform. Even then use extreme caution:
  • Use a securely attached and approved safety platform.
  • Make certain lifting mechanism is operating properly.
  • Have load backrest vertical (never tilt when elevated).
  • Make certain truck is in neutral and brake is applied.
  • Lift and lower slowly.
  • Watch for overhead obstructions.
  • Be sure you can see and hear the person being lifted.
  • Never transport anyone on the platform from one location to another.

Be a Safe Driver continued
WHEN YOU INSTALL OR CHANGE BATTERIES

- Turn the truck OFF. Disconnect the battery. Check that all controls are in neutral.
- Make certain you use the correct size and weight battery. Never operate a truck that has an underweight or undersized battery installed.
- Use a roller stand to install or remove a battery. Make sure the roller stand is the same height as the rollers in the truck's battery compartment. Also make sure the roller stand is at least as long as your battery.
- Never let anything metal touch the top of the cells. You could cause sparks or do damage to the battery. Use an insulator (such as plywood) when necessary.
- Use an approved spreader bar to place a battery on, or to remove it from a stand. Make sure you adjust the spreader bar hooks to fit the battery.

AFTER INSTALLING YOUR BATTERY

- Replace the battery retainer.
- Make certain the battery retainer is properly adjusted to prevent the battery from shifting.
- Connect the battery. Turn the truck ON and check truck operation.

Know the Hazards

TRUCK BATTERIES CAN BE DANGEROUS
Your truck battery produces fumes that can explode. It also contains acid that could burn or disfigure you.
- Do not try to install, remove, charge or service your truck battery unless you are trained and authorized.
- Never smoke or use an open flame around batteries.
- Your company should provide an area where it is safe to work on batteries. Use that area for all battery work.
- Use protective equipment such as gloves, eye shields, aprons etc.

BEFORE CHARGING YOUR TRUCK BATTERY

- See that the battery cells are filled to the proper level. Never use an open flame to check the battery.
- Read the battery charger instructions and make certain the charger is the same voltage and amperage as your battery.
- Be sure the charger is turned OFF before connecting the battery to the charger. Otherwise you might create a spark which could cause the battery to explode.

BATTERY SIZE
Use the correct size and weight battery. Never operate a truck with an underweight or undersized battery installed.

BATTERY RETAINERS
The battery could slide out if retainers are not in place. Check both sides of the truck.
Truck operation can be affected if the battery is able to shift. Make certain the battery retainers are properly adjusted.
Connect charger properly or truck can be damaged.

Make certain charger is plugged into the battery connector, not the truck connector.

Stay clear of all moving parts. Moving parts can cut or crush hands, feet, arms or legs.

Lifting people without a proper platform can cause a fall and serious injury.

Platform must be built and used as specified in OSHA and ANSI standards.

Standing or riding on the forks can cause a fall.

You can be seriously injured or killed.

Never stand or ride on forks for any reason.

Falling objects or lowering forks can cause serious injury or death.

Never stand under the forks.

While servicing, block the forks so they won’t fall.

Minimum battery size allowed.

Under size battery can affect truck handling and stability.

You could have an accident.

Use U.L. classified Type EO battery.

Batteries can produce explosive gas. Do not smoke, use open flame, or create an arc or sparks near this battery. Ventilate well when in an enclosed area and when charging.

This battery contains Sulfuric Acid which causes severe burns. Do not get acid on eyes, on clothing, to cover all conduct, flush immediately and thoroughly with water. Get medical attention if your eyes are affected.

In case of contact, flush immediately and thoroughly with water. Get medical attention if your eyes are affected.

Read and obey all of them to protect yourself and others.
